

Can you load libraries and data into P6 without manually typing it in or employing a DBA?

## INNOVATIVE PRODUCTIVITY TOOLS

The P6 loader is a member of Emerald's add-on tools family, making Primavera tools more efficient, flexible and accurate.

Emerald makes a number of P6 add-ons such as our CAPPS (Capital Project Progressing System) and TAPS (Turnaround Progressing System) as well as our EP-dashboard and EP-datawarehouse Enterprise Reporting tools.

Emerald also has a similar loader product available for Primavera Contract Management.

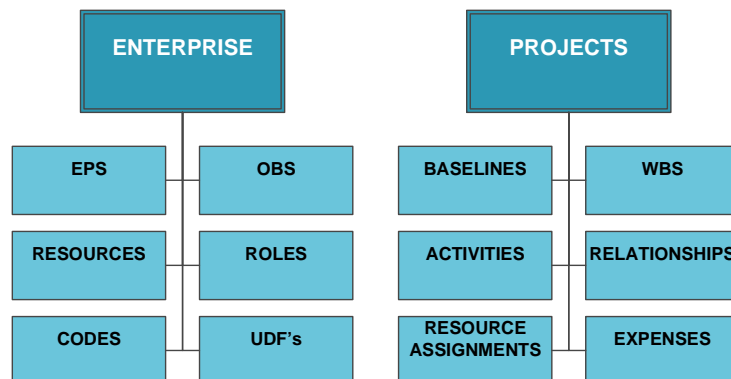

## THE CHALLENGE

Oracle Primavera P6 is a state the art Enterprise Project Portfolio Management System which has the ability to handle large data sets. However, loading data into the system can be a tedious, frustrating and expensive process of manual data entry. P6 does have some capability of modifying activities through an Excel import process but how do you load Activity Codes dictionaries, create User Defined Fields or just initially load project data into the system? How can you integrate information from other systems into P6 without a costly point to point integration program?

## THE SOLUTION

Emerald's P6 Excel Data Loader was developed to move data into P6 quickly and easily. It can be used by any user without requiring the user to be a database administrator.

Unlike loaders which use import/export functionality, the P6 Data Loader can access all of the data dictionaries within P6 (EPS, OBS, Resources, Roles, Activity Codes, Project Codes, Resource Codes, Cost Accounts, etc) and can create User Defined Fields.

The P6 Loader accesses virtually all data elements within P6

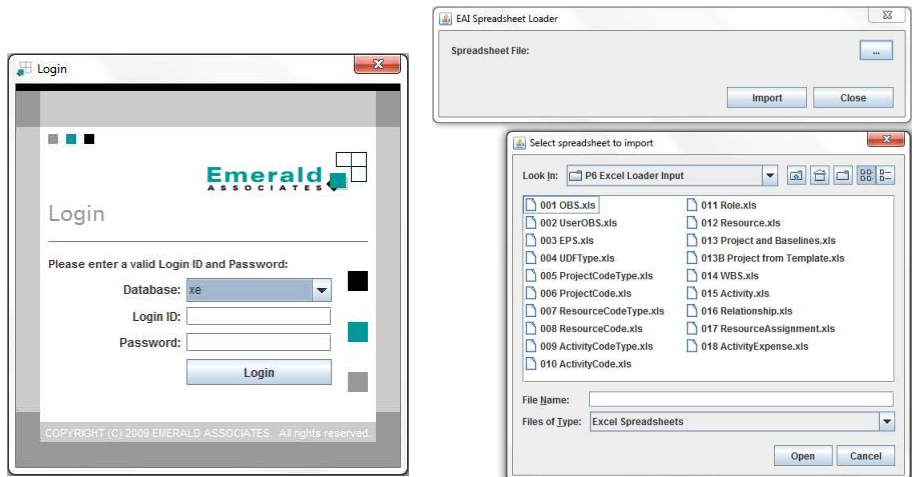

Emerald's P6 Data Loader works through the Primavera P6 API, so data is always safe and supported by Oracle. All P6 security is supported through the API, so system administrators can allow access to the loader to many users without worrying about data corruption.

A simple browser allows the user to read an Excel file and import the data directly into P6.

**Emerald**  
ASSOCIATES

The P6 Loader has a simple java interface that allows the user to access and load the spreadsheet data for loading into P6

## PRODUCT HIGHLIGHTS

The P6 Loader is a great timesaving tool for clients who:

- 1) Are rolling out P6 and need to load data dictionaries.
- 2) Need to cleanup an existing database and remap old data to new coding structures
- 3) Have large data dictionary sets that change for each project (such as Engineering or Construction Work Packages)
- 4) Need to load information into P6 from another system, such as costs, expenses or timesheet hours without building a dedicated integration program.
- 5) Want to update P6 with information based on rules of credit in another system, such as a drawing management system or a cost management system.
- 6) Need to load progress into P6 using a more robust approval process than Reflection allows.
- 7) Need to update baselines without restoring those baselines to projects first
- 8) Want to allow users to import data from Excel without making them Project Superusers in P6
