

Do you want to avoid the manual, expensive and time intensive data entry to convert from your current PM software to the industry leader Primavera P6?

EMERALD'S CONVERSION PROGRAMS

With expertise gained from working with numerous organizations in various stages of project management growth, Emerald has developed unique programs that will convert existing client data to Primavera format from any other planning & scheduling software without having to manual data entries.

EMERALD'S EXPERIENCE

Emerald has converted over 500 CASP projects from 25 plants around the world. Our typical turnaround time is less than 3 days per project once some initial setup in P6 is achieved.

Please contact your Solutions Executive if you need further information on CASP or other conversions to Primavera.

CASP to Primavera P6 Conversion

PROBLEM

Jacobs CASP (Computer Assisted Scheduling and Planning) software was being used by many businesses for Turnaround planning. As the software was being discontinued by the vendor, this left many businesses looking for a new turnaround management software solution. After purchasing and implementing Primavera's P6 the leading scheduling and planning solution, companies had the need to efficiently and accurately migrate their data in the CASP system to P6 without the manual entries. Below are the fundamentally different approaches in the two software packages:

CASP Approach

- Equipment Focus
- CMMS Background
- ADM Scheduling
- Dbase II Database
- Predefined Coding

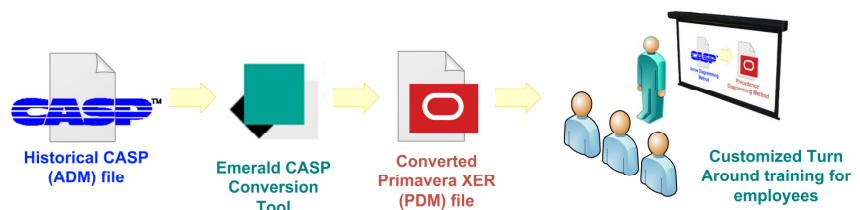

Primavera P6 Approach

- Schedule/WBS Focus
- Construction Background
- PDM Scheduling
- Oracle Database
- Unlimited Coding

SOLUTION

Emerald Associates developed a conversion program that enables automatic migration of historical job plans from CASP into Primavera P6. The client simply sends CASP files to Emerald and we use the conversion tool to migrate data into Primavera. This includes conversion of all the libraries, projects and reports. The conversion program remaps the ADM (Arrow Diagramming Method) to PDM (Precedence Diagramming Method), creates resources, codes, etc. We then review the conversion log and validate the results of the conversion. Finally the projects are sent to the client in the Primavera format, ready to be imported.

Additionally, Emerald has created customized turnaround training that explains the similarities and differences between CASP and P6. This helps employees to become familiar with Primavera faster. Another important benefit is that all the logic is migrated to Primavera accurately.

ROI

Efficient data migration at a flat price per conversion allows you to know exactly what to expect. Instead of spending a week doing laborious data entry, you'll get accurate data conversions in a day.
